RE: SELECTA DNA DISTRIBUTION IN WEST LOS ANGELES

Dear Martin Askgaard,

I wanted to take the opportunity to share some information and crime data for the area that was chosen to have SelectaDNA kits distributed in last year. The area that was chosen was in reporting district 836, within the borders of Overland Ave to Beverly, (East to West), Glen Blvd from Santa Monica Blvd to Olympic Blvd, (North to South). During calendar year 2015 there were 34 burglaries reported before the introduction of SelectaDNA in the above area. This area in West Los Angeles had the single highest amount of burglary crimes reported year in and year out. During the calendar year of 2016 there were 12 burglaries reported after the introduction of the SelectaDNA kits, which translates to a 65% decrease in residential burglaries for the area. I am very impressed by the efficacy of the SelectaDNA product and look forward to seeing its usage expanded to other areas within the West Los Angeles area.
